

MT9 Gold Toner

**Wolfgang Moersch
Am Heideberg 48
50354 Hürth**

(0)2233 943137

Contains: Ammonium thiocyanate and gold chloride 250ml each.

Approach to working solution: For print sizes up to 20x25cm 250ml toner is sufficient. 225ml demineralised water + 12,5ml toner concentrate each for single use.

Toning time is usually 10-20 minutes. If toning time is less than 5 minutes, two prints can be toned directly one after the other.

The working solution can only be kept for about one to two hours! Therefore, only the smallest possible amount should be mixed.

Silver gelatine prints are toned after fixing and washing.

Kallitypies and vanDyke prints can be toned both before and after fixing.
